

Accessibility Information

Screen Readers

- **Windows:** The Windows version of LockDown Browser is tested through the vendor and works with most available screen readers. Respondus recommends using the screen reader **NVDA** on Windows. There is a known issue with KutzweilReadTheWeb reading answer responses in LockDownBrowser .
- **Mac:** The Mac and iPad versions of LockDown Browser are tested through the vendor and work with **VoiceOver**. Voiceover is built into the Mac OS. [More about VoiceOver](#)
- **Chrome OS (Chromebooks):** The LockDown Browser for Chromebook Extension is tested through the vendor and works with **ChromeVox**. ChromeVox is built into the Chrome OS and can be triggered by using the following key combination: Ctrl+Alt+Z

LockDown Browser's functions and security remain the same when these screen readers are used. LockDown Browser does not block screen readers and conforms to WCAG 2.1.
